AI may have the ability to vary IP so that patents are not protected

Infinite Water Inc values their patents because they increase the company's ability to grow its business, launch new products and services, and expand into a wider range of geographic markets. There are companies that are willing to pay substantial sums of money to use **Infinite Water Inc** intellectual property in their own products and services. So, companies within **Infinite Complex** use licensing to serve as an additional source of revenue for their many companies and subsidiaries, at the same time producing better **ROI**.

Infinite Water Inc recognizes that intellectual property (**IP**) can be just as valuable as (or more valuable than) physical property. This is because **IP** can be shared with others in exchange for royalty fees—producing a valuable source of passive income for **Infinite Complex IP** owners. **Infinite Water Inc** is well attuned to the legal and specific limits that they grant to licensees as our ability to implement **AI** security broadens.

Infinite Water Inc continually monitors the challenges of understanding intellectual property (**IP**) ownership. **AI** presents a major challenge for legal disputes over patents and **IP** ownership, namely, who owns **AI**-generated content?

Infinite Complex and other patent sensitive conglomerates, that derive income from **IP** licensing, employ attorneys to look beyond implementation into the ethics and legality of **AI**-generated content. How can **Infinite Complex** determine if their ownership is being redefined as **AI**-generated content? What does this mean for intellectual property rights? Are non-human authors entitled to the same protections as the original human authors?

The position of **Infinite Complex** when it comes to patents, copyrights and plagiarism, is the issue of determining the infringer. Life with the internet and major search engines like Google have prompted similar concerns around **IP** infringement. But as the technology has improved, so has our ability to find and prevent instances of **IP** or copyright infringement through a variety of tools and methods. As **Infinite Complex** has evolved and adapted their research and writing strategies to create content without infringement, they will also find ways to protect **intellectual property** and make their **IP** more human by creating **AI** risk prevention.
