Holiday, Florida, March 8, 2024

So far, 2024 has provided the world with wars arising from economic, territorial, religious, or political reasons...but not always.

Infinite Complex sees the threat of **water scarcity** as one of the least profiled of geoeconomic tensions in the world. **Infinite Complex** believes in the current thinking that if the wars of the last century were fought over oil, those of this century will be fought over water. More than a third of the world's nations will face high or extremely high levels of water stress by 2050. **Infinite Complex** takes note that a third of the world's countries were directly involved in World War II. So, this least profiled catalyst for and reasons for another global eruption have the opportunity to be mitigated or hopefully vanquished.

Infinite Water Inc is not a supporter of any armed conflicts. **Infinite Complex** can however influence and reduce potential tensions arising out of **water scarcity** using very forward thinking and next generation technology. The companies within **Infinite Complex** are focused on the health and well being of the earth and all its inhabitants. **Infinite Complex** encompasses medical devices, intellectual property surrounding water and investments into **artificial intelligence**. When AI is applied to the technology within the **Infinite Complex** family of companies, they are able to have a positive effect on the future of the world.

Infinite Complex continues to seek partnerships with companies that compliment and provide synergy to the humanitarian ambitions of **Infinite Complex**. As global trade increasingly turns on technology, the demand for water will mean ever greater tensions. For this reason, we look to finance companies whose 'mission statement' is not limited to ROI but includes bringing peace to our lives. To those entrepreneurs we welcome you to be a part of what the **IC** companies call **INFINITY**.
