'EIGHT' BILLION PEOPLE

Infinite Water Inc. understands growth, not just in the business sense. **Infinite Water Inc.** and anyone who understands simple math realizes that more people mean a smaller slice of pie for each one. **Infinite Water Inc.** relates that to **water** in particular.

Infinite Water Inc. sees that the numbers of the largest population centers like China and **India** can start to lose their impact. **Infinite Water Inc.** focuses specifically on **India**. If it is visualized, people will have a different frame of reference, thinking about the country's massive population figures.

A population breakdown, similar to other big countries, the gap between **India's** largest and smallest states is quite wide.

Uttar Pradesh is the most populous country subdivision in the world at **232 million people**.

India's has 28 states and 8 union territories. When compared to other countries and territories, with comparable sizes, other familiar countries are dwarfed. Hypothetically, if **India's** states were to all become countries today, they would take up half the spots in a ranking of the world's top 20 most populous countries.

A number of **Indian** states match up evenly against some very large countries, including Maharashtra (Japan), West Bengal (Egypt), and Tamil Nadu (Germany). Of course, the largest is Uttar Pradesh (Brazil + Chile), which also happens to measure up to neighboring Pakistan.

Infinite Water Inc. and **Infinite Complex** have heavily invested finances and expansion in **India** as the market is in need of essential resources as well as having their own resources which need to be supplied worldwide.

Infinite Water Inc. research has shown multiple projections which depict that **India** is on track to become the most populous country in the world in 2024 and is expected to continue growing at a significant rate for the foreseeable future.
