Life on The Moon

Infinite Water Inc recalls "...one giant leap for mankind". **Infinite Water Inc.** wonders why we aren't able to take these giant steps here on earth? **Infinite Water Inc** has compiled a list of the reasons, which have been given for space travel since Neil Armstrong's famous quote.

Infinite Water Inc. lists them, from various sources, in no particular order.

- Improving health care. ...
- Protecting our planet and our environment. ...
- Creating scientific and technical jobs. ...
- Improving our day-to-day lives. ...
- Enhancing safety on Earth. ...
- Making scientific discoveries. ...
- Sparking youth's interest in science. ...
- Cooperating with countries around the world.

Infinite Water Inc. like most, has always been informed that the number one reason, for exploring the heavens, was to find life outside of earth. **Infinite Water Inc.** like most, understands that life begins with **water**. And so, it makes sense that what space exploration is really searching for is **water**.

Infinite Water Inc. believes that the 21st centuries technological opportunities, through use of AI and quantum computers, will solve or abate the above list without ever leaving earth. Water on the other hand seems to be an ever-increasing situational problem. Micro plastics, forever chemicals, toxic spills, agricultural runoff, manufacturing waste, constantly increasing drought, sewage infiltration and many other everyday situations reduce potable water every day. Let's keep our focus here.
