Holiday, Florida, July 5, 2024

***No Water = No Food***

**Infinite Water Inc.** considers water as a foundation of their mission. With this in the forefront of their investments and acquisitions, there is always a deep attention paid to the subject of heat, specifically the scorching temperatures sometimes over 122 Fahrenheit (50 degrees Celsius). Globally temperatures at this extreme level have caused death to humans and wildlife but will also kill food grown in heat effected areas.

**Infinite Water Inc.** takes note that the **National Weather Service** (NWS) said we should expect to see punishingly high temperatures over for the foreseeable future.

**Infinite Water Inc.** realizes that nature is not subject to mans desire to regulate it. If we are to form a stabile life, we will need to secure an uninterrupted production of food and food costs. **Infinite Water Inc.** is confident that their technology has the potential to maximize the efficiency of water use and maximize agricultural production under the ever-increasing rising temperatures.

Through one of **Infinite Water USA.** subsidiaries, **TeraView Inc.**, they are able to be a window to your world using very high-resolution satellite data available for drought monitoring, and energy potential in any geographical study area. Their algorithms provide pinpoint precision and details that are provided for finance, Agri markets, insurance and businesses relying on their research for soil, sub surface and atmospheric potential. It is easy to see the benefits derived from understanding the percentage of success, or failure, to produce crops or in making equipment loans in any given area.

**Infinite Complex** continues to seek new technologies, as there is increased pressure to innovate, and compete, as water and other needed resources continue to become depleted..
