Einstein's Special Theory of Relativity

Infinite Water Inc. considers the value of time and how their various businesses, and those under **Infinite Complex**, achieve great leaps in their constant goal of improving life. According to **Einstein**, time is relative to an observer's frame of reference. Utilizing this famous 'theory' means viewing a better future through the efforts of technology and intelligence.

Infinite Complex has no shortage of technology and intelligence in staff, production and investment. Not only are these attributes in the DNA of **Infinite Complex** but they are also part of the Mission Statement of **Infinite Water Inc.**

Infinite Water Inc. acknowledges that in the past 50 years the world has made enormous strides, especially when these advances are seen in relation to the previous 50 years. In this context the world from 1924 to 1974, with the exception of major wars and the race to space, pales with the world from 1974 to 2024. Yet, it is those 2 significant events which propelled the world into what it is today.

Of interest to **Infinite Water Inc.**, when looking at wartime technology that gained commercial value after World War II, it is impossible to ignore the small, palm-sized device known as a **cavity magnetron**. This name of the device—the cavity magnetron—may not be as recognizable as what it generates: **microwaves**. Without which the door to commercial microwave production would not exist in every kitchen in America. **Infinite Water Inc.** sees the kitchens of tomorrow each having an AWG (**Atmospheric Water Generator**). Another such example was the **Electronic Numerical Integrator and Computer**, one of the first general purpose computers. capable of performing thousands of calculations in a second, ENIAC was originally designed for military purposes. This also is the springboard for the development by **Infinite Complex** to design algorithms for super apps.

Infinite Complex directs focus on a second prominent historic significance during the mid-twentieth century, the **Space Race** which prompted the creation of a new federally-run program in **aeronautics**. Almost every aspect, birthed by the Space Race, of life in the United States today—from using home computers or watching the daily weather report, continues to grow with **Infinite Complex**.
