There are no tariffs on R&D

Infinite Water Inc. and Infinite Complex believe in research and development, known in some countries as experiment and design. It is the set of innovative activities undertaken by corporations or governments in developing new services or products. R&D constitutes the first stage of development of a potential new service or the production process. Infinite **Water Inc and Infinite Complex** pay only a small amount of interest in the doom and gloom scenarios which have been headlines since the announcement of new heavy tariffs.

Infinite Water Inc and Infinite Complex are aware of the history of American ingenuity which offers a fascinating glimpse into human creativity and progress. Think of a world not paced because of Edison or the Wright Brothers. Think of the stories of some humble beginnings. If examples are needed, here are a few mega corporations, with household names, that were seeded without needing any imported products. Google, Amazon, Apple, Disney, Microsoft, Dell, and of course Facebook started in a dorm room instead of a garage.

Infinite Water Inc and Infinite Complex intend to provide access to all of their sub corporations and subsidiaries, (as well as for their own out-of-the-box conceived plans) with a state-of-the-art research and development facility on the west coast.

Infinite Water Inc and Infinite Complex are embarking in this direction because research and development are crucial to the success of a business and because they spur innovations that improve business efficiency, reduce costs, and increase sales though new and better products. For many companies the cost to conduct their own R&D is not financially practical. Because of this, **Infinite Water Inc and Infinite Complex** believe that whether your company is a high-tech Fortune 500 company or a small online store, **Infinite Water Inc and Infinite Complex** can assist your company with the first step to incredible success.
