### *Witching*

**Infinite Water Inc. and Infinite Complex** in their ongoing efforts to educate, explain water witching, more commonly known as dowsing and considered a type of divination. While there are those that believe that dowsing will locate a water source, it is obvious that it is not scientific. Nothing in our current understanding of the laws of physics could allow for such a phenomenon by which the mere presence of something hidden is communicated to a held object, irrespective of the material composition of the artefact and the detector.

**Infinite Water Inc. and Infinite Complex** would say that dowsing is nothing more than a myth, but there are a few people today who believe in this practice. So, while **Infinite Water Inc. and Infinite Complex** will concede that dowsing can be considered a pseudoscience, you might want to try dowsing yourself. Cut a Y-shaped stick from a branch, making sure that all three sections are between 12" and 16" long and relatively flat. Good luck.

**Infinite Water Inc. and Infinite Complex** points out that the results for locating a water source will be ruled by gravity. Water being on, or below, the ground is pretty much the case 100% of the time. **Infinite Water Inc. and Infinite Complex** would like to point out that water exists on the ground as well as in the air sounding us. Few, if any, dowsers take into account that a rain cloud should also be a conductor of the diving rod.

**Infinite Water Inc. and Infinite Complex**, being forward looking operations, rely on true science especially with regard to water. **Infinite Water Inc. and Infinite Complex** have spent time and money developing patents for Atmospheric Water Generation as well as other appliances requiring refrigeration. Hopefully when made aware of the ease in which water can be created from thin air, people can stop relying on twigs.
