### ***Water Wars***

**Infinite Water Inc. and Infinite Complex** and their marketing team find that the term **Water Wars** is not understood, taken as science fiction, a myth, or is over emphasized. Well according to history, current events, and research, Water Wars are very real and a danger to life on a global scale. The marketing team found that Water-related conflicts are increasing worldwide. **Infinite Water Inc. and Infinite Complex** questions why water tensions are growing? What forms do water conflicts take? And how can they be prevented?

**Infinite Water Inc. and Infinite Complex** found that Water conflicts, often referred to as "**Water Wars**," have a long and documented history. In Mesopotamia around 2500 BC is considered one of the earliest examples. Conflicts, which range from skirmishes to protests and even acts of terrorism, have been recorded almost 1,300 times, with a significant increase in recent years, particularly after 2000. **Infinite Water Inc. and Infinite Complex** only relies on ancient history as a basis for the factual records that water has been weaponized for thousands of years. **Infinite Water Inc. and Infinite Complex** is heavily concerned with the conflicts over the past quarter century where the **Water Wars** of the future are here today.

**Infinite Water Inc. and Infinite Complex** compiled a "Top 10" list of causes:

**1**-Climate change **2**-Natural Disasters **3**-War and Conflict **4**-Waste Water **5**-Water Waste **6**-Lack of Water Data **7**-Lack of international cooperation on Shared Waer Resources **8**-Lack of Infrastructure **9**-Forced Migration and Refugee Crises **10**-Inequality and Imbalance of Power. **IWI and IC** add a **#11**- Lack of technology funding. It is no wonder that where different countries or communities rely on the same water sources, shortfalls between rising demands and diminishing availability could provoke sharpened competition or even violent conflict to secure scarce resources.

**Infinite Water Inc. and Infinite Complex** believe technologies can resolve many of the issues that create conflict. **Atmospheric Water Generation and Water Recycling** are just two.
