Mass Extinction

Infinite Water Inc. and Infinite Complex reflect on the vast unknowns that exist in our world and beyond. They defy explanation, challenging humanity's quest for knowledge and serve as poignant reminders of the limits of human understanding. Each unsolved enigma, from how the great pyramids were built to crop formations, sparks a mix of wonder, fear, and intrigue that captivates minds across generations. **Infinite Water Inc. and Infinite Complex** have studied many of the theories and conjectures which have fallen short of being definitive and have kept famous examples such as Stonehenge and Atlantis as unsolved mysteries.

Infinite Water Inc. and Infinite Complex focus on the here and now. To do so they strive to prevent our current civilization from becoming a mystery to a future Earth that wonders why the 21st century experienced a mass extinction. Earth's history has shown that there have been several mass extinctions over millions of years. These are believed to have been triggered by geological or astronomical events. As for the distant future (1.3 billion years), Earth's surface will become uninhabitable due to the Sun's increasing luminosity. **Infinite Water Inc. and Infinite Complex** is still focused on here and now.

Infinite Water Inc. and Infinite Complex use their trove of intellectual property to prevent a catastrophic event from leading to a mass extinction event. **Infinite Water Inc. and Infinite Complex** understand that water is essential for life. While the planet might continue to exist physically, the current forms of life would not. Water is vital for the chemistry of life, including photosynthesis in plants and metabolism in animals. Without water, life as we know would be impossible. Even with the vast amount of water on Earth, freshwater is not always available where and when humans need it. Climate change is exacerbating water scarcity, which can lead to catastrophic loss of life. **Infinite Water Inc. and Infinite Complex** will keep that from becoming the next mass extinction.
