**Hudson, Florida, November 7, 2025**

### *The Future and Lack of Confidence*

**Infinite Water Inc. and Infinite Complex** wonder why is it that America, home to the world's largest investment sector which accounts for nearly half of the global market's equity value and the largest single financial center in New York City home to the New York Stock Exchange and NASDAQ, the two largest stock exchanges by market capitalization is so reluctant to jump into future technology with both feet?

**Infinite Water Inc. and Infinite Complex** understand that geopolitical tensions, shifting policies and economic uncertainty are reshaping the landscape of energy investment. Despite US policy pivots, globally things are moving fast and there is a race between countries to establish a technology and manufacturing edge. Global energy investment in renewables, nuclear, grids, storage, low-emissions fuels, efficiency and electrification is set to increase. There is clear evidence that there are sensible and financially viable alternatives, however, the US is lagging behind where they should be leading.

**Infinite Water Inc. and Infinite Complex** cite a Swiss company that is turning existing train rails into energy-generating infrastructure that is the kind of elegant innovation the world needs—scalable, efficient, and land-smart.

**Infinite Water Inc. and Infinite Complex** considers that the financial markets are slow to recognize the opportunities, beyond energy, in developing ways and means to capitalize on the needs of a water stressed world. Hundreds of millions spent on replacing outdated water infrastructure is not sufficient. Clearly building thousands of desalination facilities is, at best, an expensive short-term fix with many environmental drawbacks.

**Infinite Water Inc. and Infinite Complex** have for years promoted the atmospheric water generation solution, along with several other companies, but as yet it appears that both money and public awareness are severely lacking.
