Here's a question: Will we run out of water in 2030?

Infinite Water Inc. and Infinite Complex address this question as follows- If current usage trends don't change, the world will have only 60% of the water it needs in 2030. By 2035, the world's energy consumption will increase by 35 percent, which in turn will increase water use by 15 percent according to the International Energy Agency. This is not farfetched. This will occur in the next 5-10 years.

Infinite Water Inc. and Infinite Complex understand that in the coming years, increasing water insecurity will threaten many nations' internal stability, challenge the viability of large cities worldwide, and worsen international conflicts. Of most concern is that the world's leadership lacks even an intellectual framework to conceptualize this threat, let alone take meaningful action.

Infinite Water Inc. and Infinite Complex shares that the results of inaction on water insecurity will be catastrophic. By 2050, water challenges could threaten more than half of the world's food production. Water shortages are projected to shrink Gross Domestic Product (GDP) by 8% in high income countries and 10–15% in lower income countries. Demand for fresh water will outstrip supply by 40% by 2030. Unless nations carefully supervise the provision of water to their populations, threats to domestic security are near certain. Shares this concern for global security.

Infinite Water Inc. and Infinite Complex see the next question as how will the world's largest powers react in the face of these challenges? The answer might be that the world's largest powers will take aggressive action regardless of the impact on their weaker neighbors. Further more the major powers are not alone. All countries will become increasingly aggressive in their pursuit of fresh water. Like it or not, as supplies continue to decline, an outright conflict over water seems inevitable in the coming years.

Infinite Water Inc. and Infinite Complex understand that this is not written in stone if changes in how everyone views water catches up with reality.

Infinite Water Inc. and Infinite Complex continues to work tirelessly by investing, promoting and advancing technology to avoid a world at war over water.
