Hudson, Florida, Jan. 9, 2026

You've got to eat

Infinite Water Inc. and Infinite Complex has read that the Food and Agriculture Organization of the United Nations (FAO) recorded a year-on-year increase of over 4.0 percent in the global food price index in 2025, according to a report. Since the pandemic began, grocery prices have gone up about 30%. You can blame a slew of numerous factors that have led to rising prices, including the disruption of supply chains caused by the COVID-19 pandemic and Russia's invasion of Ukraine, tariffs, bird flu outbreaks, adverse weather and increased consumer spending on food. But what about water? After all, less water equals less food and no water equals no food.

Infinite Water Inc. and Infinite Complex agree that the "slew" are certainly factors. Water stress is costly. It can lower crop yields, worsen food insecurity. The immediate picture reveals a landscape where extreme weather events and persistent water shortages are directly disrupting agricultural production worldwide, triggering sharp rises in food prices across numerous countries and sending ripple effects through global supply chains. This means that irrigated agriculture accounts for about 70% of total water withdrawals, and supplies up to 40% the global human-consumed calories.

Infinite Water Inc. and Infinite Complex know that water scarcity, drought, and climate change significantly increase food prices by reducing crop yields and livestock productivity, leading to supply shortages that drive costs up for consumers, especially for water-intensive produce like fruits and vegetables, with impacts felt globally as water stress intensifies and farmers face higher production costs.

Infinite Water Inc. and Infinite Complex believe that a severe lack of water has been found to be closely linked with food insecurity, as water scarcity impacts food access through a reduction in agricultural production that can fuel food shortages and higher grocery prices.

Infinite Water Inc. and Infinite Complex firmly work on improving water availability through its many investments. **Infinite Water Inc. and Infinite Complex** understand fully that water is the lifeblood of agriculture. It is an undeniable truth that food production hinges on the availability of water. From the vast fields of grain to the orchards laden with fruit, every aspect of our food supply chain is intimately connected to water resources. This fundamental relationship dictates, to a significant extent, the prices we pay for food.
