The Shape of our World

Infinite Water Inc. and Infinite Complex find that the "shape" of our environment is currently defined by significant, human-caused changes to the Earth's climate and physical systems, alongside natural geological processes. **Infinite Water Inc. and Infinite Complex** are, beside being an OPE, primarily in the water making business. Since our world provides life for 'living' we explore how the world is doing.

Infinite Water Inc. and Infinite Complex believe that beyond the dire consequences of a world without clean potable water they need to stay aware of the challenges facing the world. The following are undeniable facts that have escaped our ability to mitigate their effects.

Climate Crisis: The environment is experiencing unprecedented changes, including rising sea levels, melting ice caps and glaciers, ocean acidification, and widespread wildfires. These rapid changes are driven primarily by human-caused greenhouse gas emissions

Land & Ocean Alteration: Human activities have significantly altered 75% of the Earth's land surface and impacted 66% of the ocean area.

Planetary Boundaries: Several planetary boundaries, including those for climate change, biodiversity loss, and freshwater use ("green water"), have been pushed into "unprecedented territory," meaning we are in danger of destabilizing the Earth systems that support life.

Seasonal Shifts: The Earth's traditional four-season model is showing signs of abrupt transitions due to these climate changes.

Infinite Water Inc. and Infinite Complex seek support to change these effects.
