### ***Water Depletion***

**Infinite Water Inc. and Infinite Complex** constantly report on what they consider major threats to life. Water being their primary focus. Water depletion causes severe environmental and social crises, including dried-up wells, sinking land (subsidence), reduced food production, and for 2.7 billion people, chronic shortages. It accelerates ecosystem destruction, increases the cost of water, and fuels conflict or migration due to limited access to safe drinking water. This true statement seems to fall to the 'back burner' and gives way to the click bait stories that are pushed into virtually all media sources. When the personal impact is actually relevant, most people thrive on the constant political rhetoric that is old news or clothed in an updated version.

**Infinite Water Inc. and Infinite Complex** see groundwater as a valuable resource both in the United States and throughout the world. Where surface water, such as lakes and rivers are scarce or inaccessible, it is groundwater that supplies many of the hydrologic needs of people everywhere. In the United States, it is the source of drinking water for about half the total population and nearly all of the rural population, and it provides over 50 billion gallons per day for agricultural needs. Groundwater depletion, a term often defined as long-term water-level declines caused by sustained groundwater pumping, is a key issue associated with groundwater use. Many areas of the United States are experiencing groundwater depletion and it is only getting worse each day.

**Infinite Water Inc. and Infinite Complex** believe that with our viral dependency on all the various facets of AI, which will not stop expanding, the energy-water paradox which is the critical, circular dependency where generating energy requires massive amounts of water (for cooling, processing), while supplying, treating, and transporting water requires significant energy. As both resources become scarcer, this nexus creates a precarious situation where saving one often strains the other.

**Infinite Water Inc. and Infinite Complex** pose a question to readers. What is the solution? The answer is simple and provided my nature. The transfer of humidity into pure water by means of Atmospheric Water Generation.
